

jQuery Tutorial

By mkyong (<http://www.mkyong.com/author/mkyong/>) | May 27, 2010 | Updated : June 23, 2011 | Viewed : 224,881 times

jQuery (<https://www.jquery.com/>) is a small 24k (minified) JavaScript library, provides an extremely easy and powerful selectors to select almost anything you want in HTML page. In addition, it also comes with many innovative ways for DOM traversing, event handling (form, browser, mouse, keyboard), animations effects and Ajax to simplifies the web development. It will definitely change the way you code JavaScript.

Happy learning jQuery. :)

jQuery Quick Start

jQuery simple usage examples.

- jQuery Hello World Example (<http://www.mkyong.com/jquery/jquery-hello-world/>)
A simple jQuery hello world example to show how to download and include the jQuery library into a HTML page.
- Call function in JavaScript and jQuery (<http://www.mkyong.com/jquery/different-call-between-javascript-and-jquery/>)
Demonstrate the different way of calling a function in JavaScript and jQuery to create dynamic content after page loaded.
- Load jQuery from Google code (<http://www.mkyong.com/jquery/how-to-load-ajax-libraries-from-google-code/>)
Example to show how to load the jQuery library from Google and why you should do so.

Custom Domain & Build Your Own Site Start With A Free 30-Day Trial.

jQuery Practical Examples

Some jQuery practical usage and examples.

- Table Zebra Stripes effect with jQuery (<http://www.mkyong.com/jquery/how-to-create-a-table-zebra-stripes-effect-jquery/>)
Create a table zebra stripes effect with jQuery (Just one line).
- Page loading effects with jQuery (<http://www.mkyong.com/jquery/page-loading-effects-with-jquery/>)
Create a fade in page loading effect with jQuery.
- Page refresh with jQuery (<http://www.mkyong.com/jquery/how-to-refresh-a-page-in-jquery/>)
Refresh a page with jQuery `location.reload()`;

- Stop a page from exit or unload with jQuery (<http://www.mkyong.com/jquery/how-to-stop-a-page-from-exit-or-unload-with-jquery/>)
Stop a page from exit or unload with jQuery “beforeunload” event.
- Check if an image is loaded with jQuery (<http://www.mkyong.com/jquery/how-to-check-if-an-image-is-loaded-with-jquery/>)
Combine the use of jQuery “load()” and “error()” event to check if an image is loaded or not.
- Check if an element exists with jQuery (<http://www.mkyong.com/jquery/how-to-check-if-an-element-is-exists-in-jquery/>)
Example to show how to check if an element exists with jQuery.
- Add / remove CSS class dynamically (<http://www.mkyong.com/jquery/how-to-add-remove-css-class-dynamically-in-jquery/>)
Example to show how to add / remove CSS class dynamically with jQuery.
- Check if an element has a certain CSS class (<http://www.mkyong.com/jquery/how-to-check-if-an-element-has-a-certain-class-name-with-jquery/>)
Example to show how to check if an element has a certain CSS class with jQuery.
- Load JavaScript library at runtime with jQuery (<http://www.mkyong.com/jquery/how-to-load-javascript-at-runtime-with-jquery/>)
Example to show load external JavaScript library at runtime with jQuery.
- Tooltips example with jQuery (<http://www.mkyong.com/jquery/how-to-create-a-tooltips-with-jquery/>)
Example to show how to create a tooltips effect with jQuery.
- Check if jQuery library is loaded (<http://www.mkyong.com/jquery/how-to-check-if-jquery-library-is-loaded/>)
How to check if jQuery library is loaded.
- Get Delicious bookmark count with jQuery Ajax function (<http://www.mkyong.com/jquery/how-to-get-delicious-bookmark-count-with-jquery-and-json/>)
How to get Delicious bookmark count with jQuery Ajax remote call.
- Highlight table row record on hover (<http://www.mkyong.com/jquery/how-to-highlight-table-row-record-on-hover-with-jquery/>)
How to highlight table row record on hover with jQuery.

jQuery Selectors

Select anything you want in jQuery.

- Select CSS class name and id with jQuery (<http://www.mkyong.com/jquery/jquery-how-to-get-element-with-css-class-name-and-id/>)
Select the CSS class name and id with jQuery, `$(.classname)` and `$(#id)`.
- Universal * selector (<http://www.mkyong.com/jquery/jquery-universal-selector-example/>)
Select all elements, everything.
- Select multiple elements (<http://www.mkyong.com/jquery/select-multiple-elements-in-jquery/>)
Select the multiple elements with jQuery.
- Get tag name with jQuery (<http://www.mkyong.com/jquery/jquery-how-to-get-the-tag-name/>)
Get the tag name with jQuery `tagName`.
- Get tag value with jQuery (<http://www.mkyong.com/jquery/jquery-how-to-get-the-tag-value-or-element-content/>)
Get the tag value with jQuery `.html()`.
- Not selector (<http://www.mkyong.com/jquery/jquery-not-selector-example/>)
select all elements that do not match the selector.
- Empty selector (<http://www.mkyong.com/jquery/jquery-empty-selector-example/>)

select all elements that have no children or text inside.

- Contains selector (<http://www.mkyong.com/jquery/jquery-contains-selector-example/>)
Select all elements that are contains specified text.

jQuery Attribute Selectors

Everything about attribute selectors in jQuery.

- Attribute selectors [] (<http://www.mkyong.com/jquery/jquery-attribute-selector-examples/>)
8 attribute selectors examples to show the use of the attribute selectors with jQuery.

jQuery DOM Traversing

Everything about element traversing in jQuery.

- Child and Sibling Selectors (<http://www.mkyong.com/jquery/jquery-child-and-sibling-selectors-example/>)
Understanding the four type of jQuery child and sibling selectors : Descendant selector (A B), Child selector (A > B), Adjacent sibling selector (A + B) and General sibling selector (A ~ B).
- nth-child selector (<http://www.mkyong.com/jquery/jquery-nth-child-selector-example/>)
Select all elements that are ntg-child of of their parent.
- First child & Last child selectors (<http://www.mkyong.com/jquery/jquery-first-child-last-child-selector-example/>)
Select the first child or last child element with jQuery, shorthand for ntg-child.
- Only child selector (<http://www.mkyong.com/jquery/jquery-only-child-selector-example/>)
Select all elements that are the only child of their parent.
- Child selector (X > Y) (<http://www.mkyong.com/jquery/jquery-child-selector-example/>)
select all elements matched by “Y” that are child of a “X” element.
- Descendant selector (X Y) (<http://www.mkyong.com/jquery/jquery-descendant-selector-example/>)
Select all elements matched by “Y” that are child, grandchild, great-grandchild, great-great-grandchild..(any levels deep) of a “X” element.
- General sibling selector (X ~ Y) (<http://www.mkyong.com/jquery/jquery-general-sibling-selector-example/>)
Select all elements matched by “Y” that is a sibling of a “X” element.
- Adjacent sibling selector (X + Y) (<http://www.mkyong.com/jquery/jquery-adjacent-sibling-selector-example/>)
Select the immediately follow or next elements matched by “Y” that is a sibling of a “X” element.
- find() selector (<http://www.mkyong.com/jquery/jquery-find-example/>)
Select certain elements from a set of the matched elements (Descendants only).
- filter() selector (<http://www.mkyong.com/jquery/jquery-filter-example/>)
Select certain elements from a set of the matched elements (All levels).
- Different between filter() and find() (<http://www.mkyong.com/jquery/difference-between-filter-and-find-in-jquery/>)
Example to show the diffreent between filter() and find() in jQuery.
- next() selector (<http://www.mkyong.com/jquery/jquery-next-example/>)
Select the immediate following sibling element in the set of matched elements
- prev() selector (<http://www.mkyong.com/jquery/jquery-prev-example/>)
Select the immediate preceding sibling element in the set of matched elements
- children() selector (<http://www.mkyong.com/jquery/jquery-children-example/>)
Select the child of the matched elements, it's only travels a single level down.
- Difference between find() and children() (<http://www.mkyong.com/jquery/difference-between-find-and-children-in-jquery/>)
Example to show the difference between find() and children() in jQuery.

jQuery DOM Manipulation

Everything about dom manipulation in jQuery.

- `before()` and `insertBefore()` example (<http://www.mkyong.com/jquery/jquery-before-and-insertbefore-example/>)
Add a text or html content before the matched elements with jQuery.
- `after()` and `insertAfter()` example (<http://www.mkyong.com/jquery/jquery-after-and-insertafter-example/>)
Add a text or html content after the matched elements with jQuery.
- `prepend()` and `prependTo()` example (<http://www.mkyong.com/jquery/jquery-prepend-and-prependto-example/>)
Add a text or html content before the content of the matched elements with jQuery.
- `append()` and `appendTo()` example (<http://www.mkyong.com/jquery/jquery-append-and-appendto-example/>)
Add a text or html content after the content of the matched elements with jQuery.
- `clone()` example (<http://www.mkyong.com/jquery/jquery-clone-example/>)
Create a copy of the matched elements with jQuery
- `empty()` and `remove()` example (<http://www.mkyong.com/jquery/jquery-empty-and-remove-example/>)
Remove the matched elements with jQuery.
- `html()` example (<http://www.mkyong.com/jquery/jquery-html-example/>)
Get or set the html contents of the matched elements with jQuery.
- `text()` example (<http://www.mkyong.com/jquery/jquery-text-example/>)
Get or set the text of the matched elements with jQuery.
- `toggleClass` example (<http://www.mkyong.com/jquery/jquery-toggleclass-example/>)
Example to show how to use the jQuery's `toggleClass` – if matched elements do not have the class name, then add it; if matched elements already have the class name, then remove it.
- `wrap()` example (<http://www.mkyong.com/jquery/jquery-wrap-example/>)
Wrap HTML element around each of the matched elements.

jQuery HTML Form

Everything about HTML form elements in jQuery.

- Form selectors examples (<http://www.mkyong.com/jquery/jquery-form-selectors-example/>)
jQuery selectors for form elements : `TextBox`, `Password`, `Textarea`, `Radio Buttons`, `Check Box`, `Upload File`, `Hidden value`, `Select(dropdown box)`, `Submit button` and `Reset button`.
- Form events examples (<http://www.mkyong.com/jquery/jquery-form-events-examples/>)
jQuery form events : `focus()`, `blur()`, `change()`, `select()` and `submit()`.
- Get textbox value (<http://www.mkyong.com/jquery/how-to-get-textbox-value-with-jquery/>)
use `val()` to get the textbox value with jQuery.
- Add / remove textbox (<http://www.mkyong.com/jquery/how-to-add-remove-textbox-dynamically-with-jquery/>)
Add or remove textbox with jQuery.
- Select a radio button (<http://www.mkyong.com/jquery/how-to-select-a-radio-button-with-jquery/>)
Select a radio button with jQuery.
- Set a dropdown box value (<http://www.mkyong.com/jquery/how-to-set-a-dropdown-box-value-in-jquery/>)
Set a dropdown box value in jQuery.
- Disable submit button after clicked (<http://www.mkyong.com/jquery/how-to-disable-submit-button-after-clicked-with-jquery/>)
Disable submit button after clicked with jQuery.

jQuery Effects

Everything about build-in effects in jQuery.

- `fadeIn()`, `fadeOut()` and `fadeTo()` example (<http://www.mkyong.com/jquery/jquery-fadein-fadeout-and-fadeto-example/>)
Demonstrate about the jQuery `fadeIn()`, `fadeOut()` and `fadeTo()` effects.
- `slideUp()`, `slideDown()` and `slideToggle()` example (<http://www.mkyong.com/jquery/jquery-slideup-slidedown-and-slidetoggle-example/>)

Demonstrate about the jQuery slideUp(), slideDown() and slideToggle() effects.

- show() and hide() example (<http://www.mkyong.com/jquery/jquery-show-and-hide-example/>)
Demonstrate about the jQuery show() and hide() effects.

jQuery Event Handling

Everything about event handling in jQuery.

- bind() and unbind() example (<http://www.mkyong.com/jquery/jquery-bind-and-unbind-example/>)
How to attach or deattached event handler for the matched elements.
- Trigger other elements event handler (<http://www.mkyong.com/jquery/how-to-trigger-other-elements-event-handler-with-jquery/>)
How to trigger other elements event handler with jQuery.

jQuery Browser Events

Everything about browser events in jQuery.

- Mashable floating effect example with jQuery (<http://www.mkyong.com/jquery/mashable-floating-effect-example-with-jquery/>)
Example to show how to use the browser's scroll() event to implement the awesome Mashable's scrolling effect.
- resize() example (<http://www.mkyong.com/jquery/jquery-resize-example/>)
Detect the size of the browser is changed.

jQuery Mouse Events

Everything about mouse events in jQuery.

- click() and dblclick() example (<http://www.mkyong.com/jquery/jquery-click-and-dblclick-example/>)
Detect the mouse single click and double clicks with jQuery.
- mousemove() example (<http://www.mkyong.com/jquery/jquery-mousemove-example/>)
Detect the mouse move with jQuery.
- Different between mouseover() and mouseenter() (<http://www.mkyong.com/jquery/different-between-mouseover-and-mouseenter-in-jquery/>)
Example to show the different between mouseover() and mouseenter() in jQuery.
- Different between mouseout() and mouseleave() (<http://www.mkyong.com/jquery/different-between-mouseout-and-mouseleave-in-jquery/>)
Example to show the different between mouseout() and mouseleave() in jQuery.
- Different between mouseup() and mousedown() (<http://www.mkyong.com/jquery/jquery-mouseup-and-mousedown-example/>)
Example to show the different between mouseup() and mousedown() in jQuery.

jQuery Keyboard Events

Everything about keyboard events in jQuery.

- Keyboard events example (<http://www.mkyong.com/jquery/jquery-keyboard-events-example/>)
Keyboard events – keyup(), keydown() and keypress() example.
- Check if an enter key is pressed (<http://www.mkyong.com/jquery/how-to-check-if-an-enter-key-is-pressed-with-jquery/>)
Example to show how to check if an “enter key” is pressed with jQuery keyboard event.
- Detect copy, paste and cut behavior (<http://www.mkyong.com/jquery/how-to-detect-copy-paste-and-cut-behavior->

with-jquery/)

How to detect copy, paste and cut behavior with jQuery.

jQuery Common Problem

Some common jQuery problem and solution.

- jQuery \$() function is not working? (<http://www.mkyong.com/jquery/jquery-is-not-working-in-wordpress-solution/>)
Show how to avoid the jQuery conflict issue with jQuery.noConflict() or jQuery().
- Access to restricted URI denied (<http://www.mkyong.com/jquery/jquery-access-to-restricted-uri-denied-solution/>)
Solution to solve the “Access to restricted URI denied” error.

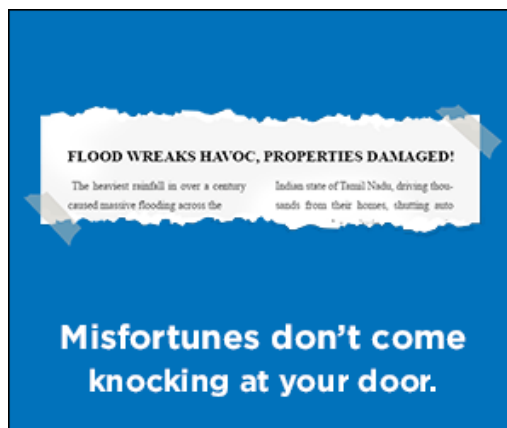

jQuery References

- jQuery API Documentation (<http://api.jquery.com/>)

Lord79 · 3 years ago

Hi mkyong,

I am a fresher and I am working on J2EE.

but from 2 week i have been in trouble resolving an issue and i think u are the right person to ask this question.

so,the problem: i am validating a form using ajax and trying to submit it on success.

code logic: `if(validateName(name)){ return true;}`

here:validateName is an ajax-call which checks that the name is not already there in database.

and problem here is: validateName() always returns "false"

i personally think: there is a delay in ajax so i get the default flag which is false.

please help

2 ^ | v · Reply · Share ›

Abhishek Sharma → Lord79 · 6 months ago

Please raise your issue in StackOverFlow and if you think it is because of delay in AJAX call please use deferred function of JQuery.

i want to know java script , jquery , Ajax in simple & easy method

^ | v · Reply · Share ›

SAGAR · 3 years ago

Hi, i am using `document.formname.submit();` in javascript which showing that submit is not a function. As i have used `action`,`alert` and many more please tell me another alternative so that i can submit the form

^ | v · Reply · Share ›

Anand → SAGAR · 3 years ago

Try this way in javascript function...

```
function demo(){  
  var formName = document.ClientMaster;  
  formName.method = "post";  
  formName.action = 'addShippingAddress';  
  formName.submit();  
}
```

Bhasha • 4 years ago

using Spring MVC 3, JQuery. Having a issue. Have a Java bean(course) that contains a list of another java object(module). Html/jsp file having a dynamic treeview. Click on form submit, want to send the bean to controller . My issue is how to set the list of objects in jquery to send as a parameter to controller.

treeview is like below

ex:

```
var name = $('#coursename').val();
```

```
var desc = $('#folderdescrip').val();
```

```
alert("name :"+name+" :::: desc :"+desc);
```

```
$.ajax(
```

```
{
```

```
type: 'POST',
```

```
url: 'createcourse.htm',
```

```
data: "name =" + name + "&description =" + desc,
```

```
//how to send the list of objects here
```

```
success: function(data)
```

```
{
```

```
alert("success")
```

```
},
```

```
error: function() {
```

```
alert('error saving course');
```

```
}
```

```
});
```

Can you help some on on this issue
